

Copy Module

- Copy module is useful :
 - To Copy a file from local server(ansible controller node) to remote servers (managed nodes)
 - Create a file on managed nodes with content
- Ansible Ad-hoc Command:
 - **ansible <host-pattern> -m ansible.builtin.copy -a "src=/tmp/demo.txt dest=/home/ansadmin/demo.txt"**
- Note: We can not append/insert a data using copy module, instead we have copy entire data for each modification
