

Ansible Roles

- Roles are ways of automatically loading related vars, files, templates, handlers and tasks with known directory/folder structure
- (OR)
- Roles are useful to create directory structure for vars, files, templates, handlers and tasks
- Command to create roles directory structure:
 - `ansible-galaxy init <reqRoleName> --offline`
- Different locations of roles:
 - `./roles` has the highest precedence
 - `~/.ansible/roles` is checked after that
 - `/etc/ansible/roles` is checked next
- We can also re-use roles
