

Different Cases to Work With Remote Servers or Managed Nodes

- Basically, there are two ways to work with Remote Servers / Managed Nodes
- They are:
 - with Password Authentication (with userId & Password)
 - With your userId & Password
 - With some serviceId & Password like ansadmin, dockeradmin, cloudadmin, dbadmin etc...
 - With different serviceId's & Password's based on environment
 - Password-less Authentication(with SSH Keys of any userId)

Ansible and Ansible-Playbooks For Automation
