

Operations using Filters And Methods

- Filter and Methods are used to do operations on data
 - Examples:
 - Finding the length of a string
 - Converting the string into upper/lower case
- Filters are from Ansible, and they are jinja format
- Methods are from Python
- How to use Ansible Jinja Filter on variable(s) or data(s) ?
 - {{ variable/'data' | **filter** }}
- How to use Python Methods on variable(s) or data(s) ?
 - {{ variable/'data'.**method()** }}
