

# Working with Managed Nodes With Password Authentication

- with Password Authentication
  - With your userId & Password
  - With some serviceId & Password like ansadmin, dockeradmin, cloudadmin, dbadmin etc...
  - With different serviceId's & Password's based on environment (**inventory /host\_vars & group\_vars**)
- **Note:** if userId/serviceId/root is same across the environment the below are the different places where we mention the required userId/serviceId/root
  1. Currently Logged-in user on terminal
  2. Ansible configuration file – ansible.cfg
  3. Inventory File
  4. group\_vars & host\_vars
  5. Ad-hoc commands & Playbooks
- Note: Priority is :
  - 5 → 4 → 3 → 2 → 1
