Ansible Tasks reusability Concepts With import_tasks & include_tasks

- There are two ways to include tasks in main playbooks
- They are using:
  - import_tasks
  - include_tasks

  - Note:
    - *Import tasks* *pre-processed at the time playbooks are parsed before the execution of the playbook.*
    - *Basically, import tasks are static*
    - *We can not pass the variables to call tasks*

    - *Include tasks* *are processed as they are encountered during the execution of the playbook.*
    - *Include_tasks are dynamic*
    - *We can pass the variables to call tasks*
